

Name: Loredana Parisi
City: Brienza (PZ)
Date of birth: 23/11/1992
Email: loredanapar@libero.it
Twitter handle:
Studies: Biotechnology

Specialization: Medical
Biotechnology

Short bio: In July 2016 I graduated in biotechnology; two years later, in 2018, I finished the specialist in medical biotechnology. I attended several training internships during and after the course of studies to refine some laboratory techniques. Currently, I work with a research fellowship at the bone tissue biopathology laboratory managed by Prof. Anna Maria Teti (University of L'Aquila).

What do you expect from this training?

From this training I expect to deepen my knowledge in research, especially as regards research on various pathologies of bone tissue. Furthermore, I hope it is also a way to get to know people with more experience to learn from.

Bonus question: What motivates you to get out of bed in the morning?

"To be prepared tomorrow, you have to do your best today."
