

Name: Marco Ponzetti
City: L'Aquila, Italy
Date of birth: 24/12/1991
Email: mp.univaq@gmail.com
Twitter handle: @ponz91
Studies: PhD in experimental medicine/medical biotechnologies
Specialization:

Short bio: I got my master's degree in medical Biotechnologies in July 2016 at the University of L'Aquila, and the PhD in Experimental medicine in April 2020 in the same University. I am currently working as post-doctoral researcher, focusing on the role of micro RNAs in the bone metastatic microenvironment. My research interests are bone metastasis, Duchenne muscular dystrophy, and bone physiology. I recently got the "New investigator award" of the ECTS, and the "Felix Bronner young investigator award" of the ASBMR, 2 of the most prestigious prizes for young scientists in the field of bone biology. I am also interested in web design, and created the "TMS – Thursday Morning Science" [website](#) and the RUBICON [website](#). I am also coordinating the restyling of the ECTS [website](#).

What do you expect from this training? To acquire new notions and refresh what I already know in the field of bone biology and pathology, with excellent speakers and mentors. I am also eager to meet new young colleagues with which I could collaborate in the future.

Bonus question: What motivates you to get out of bed in the morning? The chance that one day I will discover something that will make a difference to someone.
