

Ciro Menale

Statement from nominee:

I have been member of ECTS since 2014, starting my experience in the Society as new young investigator in the bone field. Then I was elected as member of the ECTS Academy in 2018 and co-Chair starting in the current year. I am feeling very honored to be part of the incredible ECTS group of renowned scientists coming from all over Europe. The wonderful atmosphere of the ECTS community and its high quality scientific profile made me very enthusiastic and drove me to actively participate and contribute to several ECTS activities during the Annual Congresses. My dedicated attitude in interacting with young scientists has been exploited in several ECTS New Investigator initiatives, and as part of the Board, taking advantage of my experience, I really would like to contribute in attracting and involving young investigators into ECTS community and getting them to participate at the scientific life of the Society, highlighting their scientific excellence. Moreover, I am strongly and continuously involved in disseminating science to the general population and considering the underlying scope of ECTS to promote and connect basic, translational and clinical research in order to enhance knowledge in bone pathophysiology and to improve care of patients, as Board member, I really would like to contribute to communicate and disseminate research results in the context of ECTS, as an outcome of our work which has a significant impact on society, pointing out our daily effort and enthusiasm in what we do. It would be an enormous privilege for me to contribute to the ECTS activities and join ECTS Board, interacting and creating a collaborative network with great scientists in the bone field. The excellent scientific and organizational environment of the ECTS Board could be for me an immense opportunity to be active part of musculoskeletal research.
